

## Stainless Steel Exhaust System

One of Opel GT Source's latest offerings, is a custom-designed Stainless Steel Exhaust System for the Opel GT. While this system is a significant upgrade in terms of component strength and durability, its design is also so simplified that you can install it in your own driveway at home! Some features of this new kit are illustrated below.

**#10029**

### Flange & Head Pipe

Mates to your original-style 6-bolt exhaust manifold, with a custom-design for clearance of its wider pipes in the tight chassis area here.

### Underbody Pipe

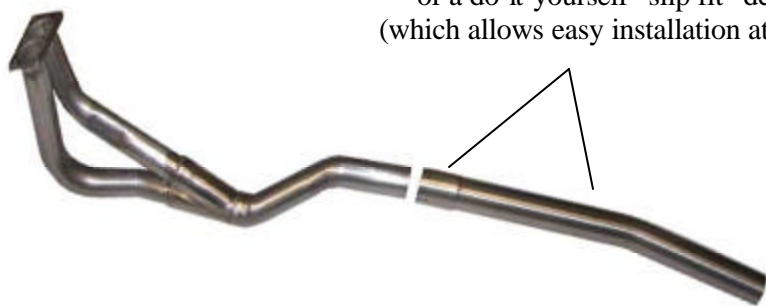

As you can see there is correct underbody clearance, plus the great benefit of a do-it-yourself "slip fit" design (which allows easy installation at home).

*OGTS Part #10029*

### Supports

This design allows use of original mount locations and hardware (such as a bar for the rear bump stop).

### Rear Resonator

Rounded baffled oval tips, provide a modern design and smooth sound

### Center Muffler

A freer-flowing, longer-lasting design, is within this polished finish.

Also included is an integrated over-the-axle pipe, for more uniform exhaust flow with less vibration.
